DATE MAILED: 12/06/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

10/749,711

Applicant(s)

JACOB, KURIAN

Examiner

Khai M. Nguyen

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 16 October 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments filed 10/16/2006 have been fully considered but they are not persuasive.

Regarding the rejection of independent claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Milman (U.S.Pub-20040014479) in view of Himmelstein (U.S.Pub-20040162064), the applicant argues, on page 6-7 of the remarks, "fails to provide to the proper teaching or motivation to combine".

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed.Cir.1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed.Cir.1992). In this case, Milman teaches a method of processing and billing work orders by technician hand-held device. The method for establishing the communication is discussed throughout the document. Himmelstein discusses a system and method for matching users based on proximity and/or user-defined profiles. The combination is proper since it would enhance the capability of Milman device and provide Himmelstein's device the ability to communicate with other mobile without requiring a base station.

Regarding the rejection of independent claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chaskar (U.S.Pub-20040224702) in view of Milman (U.S.Pub-20040014479) in further view of Himmelstein (U.S.Pub-20040162064), the applicant argues, on page 6-7 of the remarks, "fails to provide to the proper teaching or motivation to combine".

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed.Cir.1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed.Cir.1992). In this case, Chaskar teaches system and method for access control in the delivery of location information, and Milman teaches a method of processing and billing work orders by technician hand-held device. The method for establishing the communication is discussed throughout the document. Himmelstein discusses a system and method for matching users based on proximity and/or user-defined profiles. The combination is proper since it would enhance the capability of Milman device and provide Himmelstein's device the ability to communicate with other mobile without requiring a base station.

Regarding claims 1-24, Applicant argues, on page 6-7 of the remarks, that Milman does not disclose, teach, or suggest "direct communication between an apparatus associated with the service provider dispatched to the user, where all

transactional interaction associated with the service provider is entered directly into the technician hand held communication device or the communication device in the technician's vehicle"

The Examiner respectfully disagrees with Applicant's argument because Milman clearly discloses that direct communication between an apparatus associated with the service provider dispatched (fig.1, comp-fix 28, technician hand held communication device 26) to the user (fig.2, paragraph 0007-0009), where all transactional interaction associated with the service provider is entered directly (the technician can enter service call completion information, time on job and orders for replacement parts, using the hand-held device, and which automatically computes a customer bill or invoice, and provides for the customer a summary of billing data, also on the hand-held device) into the technician hand held communication device (hand-held communication device 26) or the communication device in the technician's vehicle (fig.2, paragraph 0007-0009).

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 24 is rejected under 35 U.S.C. 102(e) as being anticipated by Milman (U.S.Pub-20040014479).

Regarding claim 24, Milman teaches an apparatus associated with a user comprising:

means for communicating a service request from the user to a service provider agent (fig.1, paragraph 0024-0025);

means for providing location information associated with the user of the service to the service provider agent (fig.1, paragraph 0024-0025, 0028); and

means for directly communicating service transaction data with a service provider dispatched responsive to the service request and the location information (fig.1, paragraph 0007-0009, 0028)

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Milman (U.S.Pub-20040014479) in view of Himmelstein (U.S.Pub-20040162064).

Regarding claim 1, Milman teaches a method of providing a service to a user of the service (fig.1, paragraph 0024-0025) comprising the steps of:

establishing a first communication connection (fig.1, paragraph 0024-0025), the first communication connection being between a user communication device and a service provider agent (fig.1, paragraph 0024-0025);

requesting a service from the service provider agent via the first communication connection (fig.1, paragraph 0028);

providing location information identifying the location of the user to the service provider agent (fig.1, paragraph 0024-0025, 0028);

dispatching a service provider to the user based upon the requested service and the location information (fig.1, paragraph 0008-0009, 0028);

establishing a second communication connection (paragraph 0029); and

completing a service transaction via the second communication connection upon rendering of the service by the service provider (paragraph 0008, 0036)

Milman fails to specifically disclose an establishing a second communication connection, the second communication connection being between the user communication device and the service provider. However, Himmelstein teaches an establishing a second communication connection (fig.1, paragraph 0002, 0028), the second communication connection being between the user communication device and the service provider (fig.1, paragraph 0002, 0028, *mobile unit 16 can communicate with another mobile unit 16*). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to apply the teaching of Himmelstein

to Milman to allow mobile to communicate with other mobile without requiring a base station.

Regarding claim 2, Himmelstein and Milman further teach the method of claim 1, wherein the first communication connection comprises a wireless communication connection selected from the group of wireless communication connections (see Milman, fig.1, paragraph 0024-0025) comprising: a cellular radiotelephone communication connection (see Milman, fig.1, paragraph 0024-0025), a paging communication connection and a wireless data communication connection (see Milman, fig.1, paragraph 0024-0025).

Regarding claim 3, Himmelstein and Milman further teach the method of claim 1, wherein the step of providing location information comprises determining location information at the user communication device (see Milman, paragraph 0024-0025, 0028) and communicating the location information to the service provider agent via the first communication link (see Milman, fig.1, paragraph 0024-0025)

Regarding claim 4, Himmelstein and Milman further teach the method of claim 1, wherein the second communication connection is established relative to the proximity of user communication device and the service provider (see Himmelstein, fig.1, abstract).

Regarding claim 5, Himmelstein and Milman further teach the method of claim 1, wherein the second communication connection comprises a communication connection selected from the group of communication connections comprising a Bluetooth

Art Unit: 2617

communication connection and an 802.11-type communication connection (see Himmelstein, paragraph 0060).

Regarding claim 6, Himmelstein and Milman further teach the method of claim 1, wherein the step of dispatching a service provider comprising obtaining service preference data for the user (see Himmelstein, paragraph 0060, 0097).

Regarding claim 7, Himmelstein and Milman further teach the method of claim 1, wherein the step of completing a service transaction comprises communicating an information token (see Milman, paragraph 0008, 0036).

Regarding claim 8, Himmelstein and Milman further teach the method of claim 7, wherein the information token comprises service instructions (see Milman, paragraph 0008, 0036).

Regarding claim 9, Himmelstein and Milman further teach the method of claim 7, wherein the information token comprises payment data (see Milman, paragraph 0008, 0036).

Regarding claim 10, Himmelstein and Milman further teaches the method of claim 1, wherein the step of requesting a service is affected in a single user action (see Milman, paragraph 0024-0025).

Regarding claim 11, Himmelstein and Milman further teach the method of claim 10, wherein the single user action comprises selection of a bookmark for establishing

the first communication connection and requesting the service (see Milman, paragraph 0028).

Regarding claim 12, Himmelstein and Milman further teach the method of claim 1, wherein the step of dispatching a service provider to the user comprises informing the user to transit to a location of the service provider (see Milman, paragraph 0008-0009, 0028, see Himmelstein, paragraph 0060, 0097).

5. Claims 13-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chaskar (U.S.Pub-20040224702) in view of Milman (U.S.Pub-20040014479) in further view of Himmelstein (U.S.Pub-20040162064).

Regarding claim 13, Chaskar teaches a user communication device (fig.2) comprising:

a processor coupled to a memory (fig.2, element 62, 64, 49), the memory including a control program for controlling operation of the processor (fig.2, element 50);

a user interface coupled to the processor (fig.2, element 56, 58);

a transceiver coupled to the processor (fig.2, element 12, 50),

Chaskar fails to specifically disclose the transceiver being operable to establish a first communication connection with a service provider agent; and wherein, the processor is operable responsive to an input at the user interface to cause the transceiver to communicate via the first communication connection a service request to the service provider agent, the service request including location information relating to

Art Unit: 2617

the user communication device, and to communicate service transaction data between the service provider, which is dispatched to the user responsive to the service request and the location information, via the second communication connection upon rendering of the requested service. However, Milman teaches the transceiver being operable to establish a first communication connection with a service provider agent (fig.1, paragraph 0024-0025); and wherein, the processor is operable responsive to an input at the user interface to cause the transceiver to communicate via the first communication connection a service request to the service provider agent (fig.1, paragraph 0024-0025), the service request including location information relating to the user communication device (fig.1, paragraph 0024-0025), and to communicate service transaction data between the service provider (paragraph 0008, 0036), which is dispatched to the user responsive to the service request and the location information (paragraph 0008-0009, 0028), via the second communication connection upon rendering of the requested service (paragraph 0024-0025, 0028). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to apply the teaching of Chaskar to Milman to provide customer enjoys rapid response, such as one-hour on site service, with immediate service and billing information.

Chaskar and Milman fail to specifically disclose a second communication connection with a service provider. However, Himmelstein teaches a second communication connection with a service provider (fig.1, paragraph 0002, 0028, 0097, *mobile unit 16 can communicate with another mobile unit 16*). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made

to apply the teaching of Himmelstein to Milman and Chaskar to allow mobile to communicate with other mobile without requiring a base station.

Regarding claim 14, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the location information comprises user communication device determined location data (see Milman, paragraph 0024-0025).

Regarding claim 15, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the service request comprises user service preference data (see Milman, paragraph 0024-0025).

Regarding claim 16, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the service request comprises user preference look-up data (see Milman, paragraph 0028).

Regarding claim 17, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the first communication connection comprises a communication connection selected from the group of communication connections comprising a cellular radiotelephone communication connection (see Milman, paragraph 0024-0025), a paging communication connection and a wireless data communication connection (see Milman fig.1, paragraph 0024-0025, see Himmelstein, paragraph 0031).

Regarding claim 18, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the second communication connection is proximity limited (see Himmelstein, fig.1, abstract).

Regarding claim 19, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the second communication connection comprises a communication connection selected from the group of communication connections (see Milman, paragraph 0024-0025) comprising a Bluetooth communication connection and an 802.11-type communication connection (see Himmelstein, paragraph 0060).

Regarding claim 20, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the service transaction data comprises an information token (see Milman, paragraph 0008, 0036).

Regarding claim 21, Himmelstein, Milman and Chaskar further teach the user communication device of claim 20, wherein the information token comprises data selected from the group of data (see Milman, paragraph 0008, 0036) comprising: service instruction data and service payment data (see Milman, 0008-0009, 0028).

Regarding claim 22, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, comprising a location detector coupled to the processor to provide the location information (see Chaster, paragraph 0003, 0047-0048).

Regarding claim 23, Himmelstein, Milman and Chaskar further teach the user communication device of claim 13, wherein the processor is operable to affect the service request responsive to a single user action (see Chaster, paragraph 0003, 0047-0048).

***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

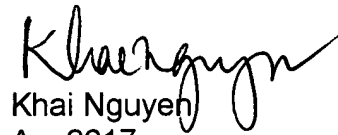

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khai M. Nguyen whose telephone number is 571.272.7923. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph feild can be reached on 571.272.4090. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
